

FEDERAL RESERVE BANK OF MINNEAPOLIS

BANKING AND POLICY STUDIES

Minneapolis Options Report – October 31st

Markets generally retraced the large moves they experienced two weeks ago and uncertainty appears to have receded. Standard deviations of market-based probability distributions (MPDs) for inflation, interest rates, banks and commodities all declined during the last two weeks. Oil and inflation MPDs continue to indicate a bias toward lower prices.

Inflation

Market probabilities for high inflation based on caps and floors on the CPI remain very low. Equivalently, market probabilities of inflation below 1% are elevated. This is especially true in the near-term where market probabilities of inflation of less than 1% remain at elevated (42% in the graph below).

Interest rates

Spot prices for three month LIBOR futures rose slightly from two weeks ago. We note that the market expectations calculated from LIBOR futures with 3 and 5 year expiries are biased toward higher rates (skew values = 1 and 0.78 below) but that bias remains historically low (shaded). This is consistent with expectations for lower inflation and lower short-term rate increases.

MPD SKEWS

Indicator	Latest	2-Week Change	1-Year Trend with min/max points	Long-Term Range with median, IQR, and max/min
3 Month LIBOR (3-Year Expiry)	1	0.35		
3 Month LIBOR (5-Year Expiry)	0.78	-0.095		

MPDs based on futures contracts for five and ten year Treasuries suggested a decline in tail risk relative to two weeks ago. The short-term spike in general market volatility has receded and this was reflected in MPD statistics in this report.

Banks and Insurance Companies

Equity markets rallied as volatility fell. The S&P 500 rose approximately 6.4% over the two weeks since our last report. The average bank in our 17 company universe rose 7.2% while the average of 11 insurance companies we follow rose 8.4%. Market probability densities based on bank and insurance company stocks also reflected the market moves since our last report. Standard deviations of the MPDs declined in excess of 300 basis points.

Additional Details:

- European banks did not experience the same reductions in MPD standard deviations as did large US banks. Moreover, the stock price for Credit Suisse fell during the past two weeks (the only bank to suffer a decline). The four European bank MPD standard deviations fell by an average of 2% while the US bank MPD standard deviations fell by 4%.
- Hartford Financial options experienced above average volume. The majority of the out-of-the-money volume occurred at prices below the current spot. Consistent with this trading pattern the market-based probability density became more negative.

Other commodity markets

Tail risks, as measured by MPD standard deviations generally declined over the past two weeks. The MPDs for agricultural commodities, however, had a distinct trend from other markets. The soybean, corn, wheat and cattle markets experienced higher spot prices. The MPDs derived from options on futures prices in those markets indicated *higher* tail risks in the form of increased standard deviations and skews.

Additional Details:

- Trading in options on currency futures is robust as the dollar continues to strengthen. We note that our data does not incorporate the news of the Bank of Japan's updated policy strategies.
- Tail risks measured in the market for WTI crude oil moderated somewhat from our last report. Spot prices were slightly higher, the MPD standard deviation fell by 150 basis points, and the MPD skew was less negative.

- Uncertainty in the price of soybeans increased (see graph below). The standard deviation of the MPD derived from options on soybean futures increased nearly 300 basis points and is at a two year high.

- Silver and gold prices have been falling for the past 3 months and currently are near 4 year lows. The standard deviation of the MPD derived from options on silver futures, which briefly spiked in September, has begun to retrace the change. MPDs from both markets continue to show a bias toward lower prices.
