

## Minneapolis Options Report – Jan 27<sup>th</sup>

Median inflation expectations rose over the two week period for both inflation tenors; notably the 5-year tenor has risen at a steady rate of 3 bps per week since September 2016. MPD skews for Treasuries point towards neutral investor bias; the 5-year note posted near record volume. The 5-year LIBOR tenor experienced one of its largest increases within its 47-month observational history as the market probability of LIBOR less than 1% fell by -7 percentage points. Options volumes for the S&P 500, banks, insurance, and the iShares US Real Estate Index were all at elevated levels; notably banks and insurance volumes were call-heavy while the remaining markets were put-heavy. The dollar was weaker against all currencies we follow.

### *Inflation*

Market-based inflation expectations derived from caps and floors on the CPI for 1- and 5-year periods increased for both tenors by 3.1 bps and 3.9 bps respectively. Median inflation expectations currently stand at 2.31% for the 1-year tenor and 2.23% and 5-year tenor. The increase registered by the 5-year tenor is shown for reference (see figure, below).

Additional detail:

- Median expectations for the 5-year tenor have been increasing since September 2016 at a rate of 3 bps per week and stands at its highest level in 12 months.

### *Interest Rate*

Treasuries prices declined over the two-week period; consequently yields rose; MPD skew levels have increased from lows plumbed on December 14, 2016 and currently signal neutral bias. The 5-year LIBOR tenor experienced its largest increase since February, 2016 and the probability of a low LIBOR,

defined as the market probability of LIBOR below 1%, fell by -7 percentage points. The increase in median LIBOR expectation represents one of the largest changes in nearly four years (see chart, below).

### Median 3 Month LIBOR Expectations

#### *Banks and Insurance Companies*

The S&P 500 rose by 1% over the past two weeks with the 6- and 12-month tenors posting an average MPD standard deviation decrease of -0.95 percentage points sending the metric to its lowest level in 12 months for each tenor. The 20 banking firms we follow posted a -0.2% return, underperforming the market. The 11 insurance companies we follow outperformed the broader market index returning 1.4% on average.

#### Additional details:

- The S&P 500, 9 of the 20 banks we follow and 3 of the 11 insurance firms we follow posted the volume increases at or above the 75<sup>th</sup> percentile level of their respective 47-month observational history. While financials (banking and insurance) had call-heavy volume, real estate, treasuries and the S&P 500 had put-heavy volume.

### Aggregated Call and Put Share of Markets with Options' Volume Above 75th Percentile

- MPD standard deviation, a proxy for investor uncertainty, for the S&P 500 has fallen at an average rate of -0.1 percentage points per week since it registered its high on February 11, 2016.

### *Other Markets*

- The iShares US Real Estate Index outperformed the market returning 1.2%; MPD standard deviation decreased by -0.7 percentage points. As noted above, the index posted record volume over the two-week period.
- The dollar was weaker all the currencies we follow. MPD standard deviation fell across all currency pairs, implying a reduction in investor uncertainty. MPD skew for the USD-Yen pairing signals towards neutral bias.
- Gold and silver rose by 0.1% and 0.8% respectively. MPD standard deviation fell by an average 0.65 percentage points for both metals. MPD skews currently signal neutral bias for both metals.
- WTI crude fell by -1.4% over the 2 week period. Changes in MPD statistics were mostly flat.
- Corn, soybeans and wheat increased by 2.6%, 4.2% and 1.4%. MPD skews for all crops signal investor bias towards future higher crop prices.
- Agricultural livestock increased modestly with cattle and hogs each posting returns of 0.65%. MPD standard deviation rose for both markets by an average 0.6 percentage points.
