September 28, 1934

DISTRICT SUMMARY OF BUSINESS

The August volume of business in the Ninth Federal Reserve District showed a definite gain over that of July, despite a continuation of drouth conditions and labor disturbances during the early part of the month. The country check clearings adjusted index rose sharply from 104 in July to 111 in August, a new high since October, 1929. The adjusted department store sales index climbed from the 1934 low point in July, 61, to 73. The adjusted bank debits index increased two points to 64 in August; the adjusted miscellaneous and l.c.l. freight carloadings indexes rose from 61 to 64 and from 60 to 61, respectively. The country lumber sales adjusted index increased from 51 in July to 59 in August.

August business volume was also larger than in the same month last year, even though business volume was at a comparatively high level last August. The adjusted country check clearings index was 22 points higher and the bank debits index 2 points higher, while the miscellaneous carloadings index was up 10 points and l.c.l. index was unchanged. Total freight carloadings (excluding l.c.l.) in the northwestern district were 6 per cent larger than in August last year, largely on account of the sharp increase in livestock shipments, although partly due to substantial increases in grain products and miscellaneous shipments. Coal and coke shipments combined were down about 30 per cent, followed by ore and forest

products with declines of 19 and 14 per cent. Electric power consumption in the eastern part of the district showed a gain of 10 per cent, but the total for the Ninth District was a little below that of a year ago, because of the greatly reduced mining activity in Montana. Flour shipments from Minneapolis were larger in August than a year ago, and the number of real estate transactions in Hennepin and Ramsey counties was much larger than in the same month last year. Butter production was about 1 per cent greater than in August last year. Other increases over last year's August volume occurred in country lumber sales, securities sales and wholesale grocery and hardware sales. Linseed products shipments, the valuation of building permits and contracts and wholesale shoe sales, were smaller than in August of last year.

Retail trade during August in the Ninth Federal Reserve District, as a whole, was 9 per cent larger than in August last year, according to the first three hundred and forty-two reports received from cooperating stores. Reports from country stores indicate a gain of about 22 per cent, reflecting increased income from grain marketings in Montana and further drouth relief and benefit payment disbursements. The greatest percentage increase was shown by stores in the plains section of Montana where the marketing of a wheat crop almost as large as a year ago, but at greatly improved prices, resulted in a substantial increase in the cash income of farmers. The resort sections of Wisconsin and Michigan showed a gain of 30 per cent. The total of reported retail sales in each

Bank Debits Index for Reporting Cities in the Ninth Federal Reserve District, Adjusted for Seasonal Variations.

Country Check Clearings Index, adjusted to remove Seasonal Variations.

of the eighteen rural subdivisions of our district was larger in August this year than a year ago. City store sales were slightly below those of August last year, largely on account of the truck drivers' strike in Minneapolis which was not terminated until August 22. The trend of retail sales in the various subdivisions of the district is given in the following table:

Retail Trade

	% Aug. 1934 of Aug. 1933
Mpls., St. Paul, Duluth-Superior... (22 stores)	99
Country Stores (320 stores)	122

Wisconsin—West Central (42 stores)	114
Ninth District (342 stores)	109

In the first half of September bank debits and country check clearings did not quite maintain the level of August, after correction for seasonal influences. However, both series continued to be above last year's volume. Country check clearings in the first sixteen business days of September were 29 per cent larger than in the corresponding period last year. Bank debits at seventeen cities during the first three weeks of September were 11 per cent larger than in the same three weeks a year ago.

DISTRICT SUMMARY OF BANKING

Banking developments in recent weeks were featured by sharp increases in deposits both at city banks and country banks, which were large enough to be reminiscent of the autumn deposit increases before the beginning of the depression. The daily average of country member bank deposits for August was nearly 6 million dollars larger than the daily average for July and brought the total of deposits of country member banks up to the highest level since September, 1932. The increase in these deposits from July to August was shared by country banks in all states of the district except Michigan.

While it is not possible from available data to determine completely what other changes in country bank condition accompanied this increase in deposits, our weekly records show that country banks have been increasing their deposits in city banks very sharply. On September 12, country banks were carrying with city correspondents in this district balances of more than 117 million dollars, which was the largest total in our record which extends back through 1926. There was a minor reduction in these balances during the week ending September 19, but on that

date these balances were 3 million dollars larger than five weeks earlier and 45 million dollars larger than a year ago.

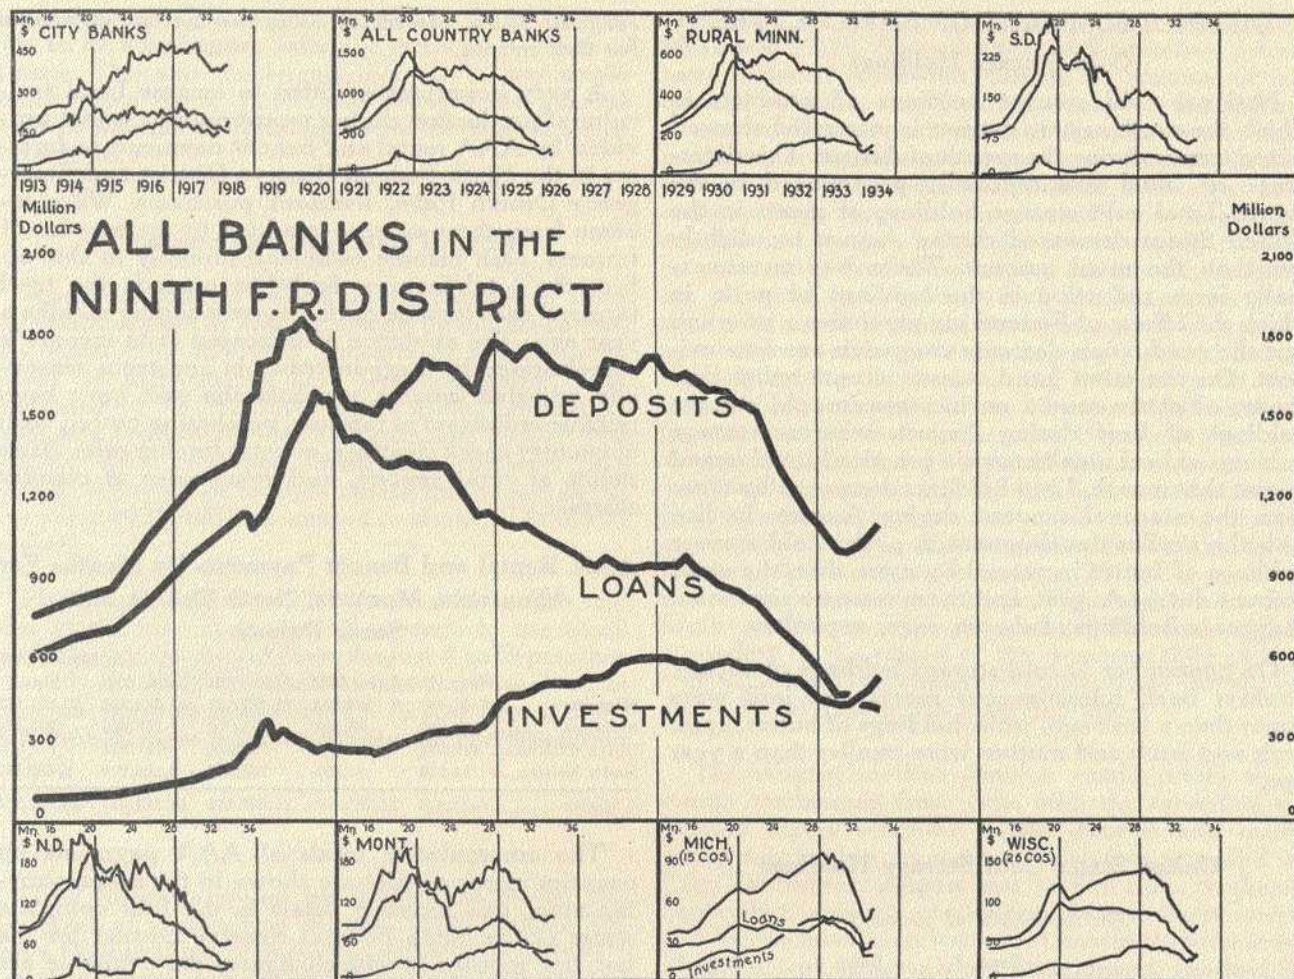

City member banks in this district have experienced this summer and fall one of the most rapid increases in deposits in their history. From May to September, their deposits increased 65 million dollars. The peak for the year to date was reached on September 12, and in the succeeding week a minor decrease of 8 million dollars occurred. On September 19, deposits of city member banks were 82 million dollars larger than a year ago. The increase in deposits in recent weeks was partly due to the growth of country bank balances, which was mentioned in the preceding paragraph, and partly the result of the beginning of the autumn increase in commercial and individual demand deposits which ordinarily reach their peak in November.

On the asset side of the combined city member bank balance sheet, loans to customers have shown little change in recent weeks and have remained at a level about 10 million dollars higher than the all-time low point reached last summer. Investment holdings of city member banks declined slightly in the last week of August, but increased by a larger amount in the week ending September 19. On that date, investment holdings of these banks were at the highest point since our record began in 1929 and were 58 million dollars larger than investment holdings a year ago.

BANKING DURING THE FIRST HALF OF 1934

The first six months of 1934 witnessed financial developments of the greatest significance to the banks of this district. On January 1, the temporary insurance of deposits by the Federal Deposit Insurance Corporation went into effect. During the six-month period, large sums were secured by the banks through the sale of preferred stock and capital notes and capital debentures to the Reconstruction Finance Corporation. Refinancing of debts owed to banks and others by farmers was carried on in large volume through the Government financial agencies. Disbursements by the Agricultural Adjustment Administration and Federal Emergency Relief Administration brought funds into this district. In addition, the volume of business increased throughout the half-year.

As has been previously indicated by preliminary and fragmentary figures, the deposits of banks in the district increased sharply during the first half of 1934 and reached a total of \$1,093,000,000 on June 30. This represented an increase of \$80,000,000 over deposits on December 31, 1933, and brought the deposits of operating banks to a higher level than that prevailing immediately before the bank holiday. Loans of banks in this district continued to decline. On June 30, they amounted to \$405,000,000, a decrease of \$32,000,000 from the figure six months before and the lowest total since our record began in 1913.

As a consequence of the increase in deposits and the decrease in loans, together with the receipt of additional funds by the sale of preferred stock and capital obligations to the Reconstruction Finance Corporation, the banks of the district were able to increase their investment holdings \$81,000,000 during the six-month period and at the same time to increase their cash and balances due from banks by \$38,000,000. Their investments and cash and balances due from banks on June 30 were at the highest level since the summer of 1931. Borrowings from other banks decreased to a total of only \$1,266,000, the smallest reported borrowings in our twenty-year record.

The banking changes during the six-month period were most pronounced in country banks. The grand total of deposits of all country banks in the district, both national and state, was \$675,000,000 on June 30. This figure was \$54,000,000 larger than total deposits of these country banks on December 31, 1933. Loans of country banks decreased \$19,000,000 during the six-month period, investments of country banks increased \$41,000,000, cash and balances due from banks increased \$35,000,000, and borrowings decreased \$5,000,000.

At city banks, deposits increased \$26,000,000 during the six-month period, loans decreased \$13,000,000, investment holdings increased \$40,000,000, and cash and balances due from banks increased more than \$2,000,000. City banks were almost entirely out of debt throughout the six-month period.

DISTRICT SUMMARY OF AGRICULTURE

Cold Storage Holdings

National cold storage holdings of products in which the northwestern farmer is interested showed mixed trends during the month of August. This divergence of trend was especially pronounced in the meats. Total cold storage holdings of meats in the United States decreased during August by slightly less than the usual amount. There was an abnormally large reduction in the holdings of pork, in which the effects of Federal pig purchases a year ago and the production decrease campaign are now evident. On the other hand, recent drouth relief purchases of cattle caused an increase in cold storage holdings of beef during August, whereas storage holdings of beef usually remain practically unchanged during that month. Lard holdings decreased by more than the seasonal amount during August, in line with the similar development in pork. Cold storage holdings of butter increased by more than the usual amount during August, and there were no significant changes in holdings of cheese, eggs, or poultry.

On September 1, cold storage holdings of cheese, poultry, beef, miscellaneous meats and lard were larger than a year ago, while holdings of butter, eggs, pork and lamb and mutton were smaller than a year ago.

Farm Income and Prices

Farmers' cash income from marketings of seven important agricultural products during August was estimated to be 17 per cent smaller than in August last year, because of greatly reduced marketings, as prices for all grains and nearly all classes of livestock were much higher than a year ago. Decreased marketings of potatoes and at a lower price contributed somewhat to the decline in the farmers' cash income estimates. The income estimates exclude benefit payments and loans to farmers by Government instrumentalities, but the AAA sow and pig purchases during

August, 1933, are included in the income estimates for that month.

A very important addition to income from agricultural production during recent months is that provided by AAA rental and benefit payments to farmers in the Ninth Federal Reserve District and Emergency Drouth Relief livestock purchases. When income from these sources is added to the amount of farmers' cash income estimated monthly in this office, the total income doubtless exceeds the total farmers' cash income during corresponding months a year ago. The existence of increased farm income is corroborated by large increases in numerous seasonally adjusted indexes which in the past have been reliable indicators of farmers' purchasing power, such as country check clearings, country lumber sales, bank debits at rural centers, and retail sales at country stores.

AAA Rental and Benefit Payments By Months For Minnesota, Montana, North Dakota and South Dakota

	May, 1934	June, 1934	July, 1934	Aug., 1934	Four-month Total
Minnesota	\$ 61,942	\$ 953,044	\$1,427,231	\$1,362,966	\$3,805,183
Montana	109,516	63,663	81,076	139,378	393,633
North Dakota	197,333	151,309	132,224	197,037	677,903
South Dakota.....	54,819	94,485	165,277	3,120,970	3,435,551
4 States	\$423,610	\$1,262,501	\$1,805,808	\$4,820,351	\$8,312,270

The accumulative totals of AAA payments by counties in our district are shown in the accompanying map, and monthly totals in the four complete states of the Ninth Federal Reserve District for the last few months for which figures are available are given in the accompanying table.

Grain prices continued to climb during August, which is contrary to the usual trend in important grain marketing months, and were considerably higher than in July. Hog prices featured the livestock markets late in the month and reached \$7.75 to establish a new high price since 1931. Other livestock prices were not as buoyant as hog and grain prices during August, but prices for all classes were unchanged or increased with the exception of lambs, which continued to decline. The price of butter rose 3 cents per pound from July to August. The significance of the upswing in the level of those farm product prices which are important in the Northwest is indicated by the change in the Minnesota composite farm price index computed by the University of Minnesota. This index, which is slightly adjusted to re-

move seasonal fluctuations, increased from 55.7 in July to 72.4 in August, using the years 1924-1926 as a base. This was the largest increase in any single month since April, 1919, and brought the general level of Minnesota farm prices to the highest point since 1930.

Wheat and Flax Marketing Progress

Wheat marketings fell off during September from the seasonal peak in August. Owing to the exceptionally small crop this year, receipts of northwestern wheat at Minneapolis and Duluth-Superior only amounted to 17,782,000 bushels during the period from July 1 to September 15. A year ago, 30,000,000 bushels were received during the corresponding period, and average receipts during this period in the five years 1928-1932 amounted to about 50,000,000 bushels.

Flax marketings were also very small in the early part of the new crop year as a result of the small crop. During the period from August 1 to September 15, only 1,198,000 bushels of flax were received at principal markets in this district. A year ago, 2,218,000 bushels were received during the corresponding period.

Crops

Crop forecasts issued by the United States Department of Agriculture for the Ninth Federal Reserve District showed little change between August 1 and September 1, with the exception of corn and oats. The corn forecast on September 1 was about 15 per cent smaller than that of August 1, and the forecasted production of oats was about 10 per cent larger. As a result of these changes, the corn forecast was less than half as large as the 1924-1933 average, while the oats forecast was but a little more than one-third of the 1924-1933 average production. Most of the decrease in the corn forecast was in Minnesota, but substantial decreases were also reported for North and South Dakota. The forecasted production of oats in South Dakota also declined during August, but was more than offset by increases in Minnesota and Montana. Spring bread wheat, barley and tame hay also showed small increases in forecasted production, but further decreases occurred in durum, flax and potatoes.

Livestock Marketings

The rapid rise in hog prices during August was easily the outstanding feature of the livestock market at South St. Paul. Scoring a 40 cent rise during the week ending August 2, to establish a new "top" for the year, additional gains were registered during each week of August. For the week ending August 31, the "top" price paid was \$7.75 and the average

price paid for all hogs at South St. Paul (excluding pigs) was \$7.20. Since the first of September, prices have softened somewhat, largely on account of increased supplies, but partly because of the failure of eastern dressed pork prices to show corresponding increases, in the face of the expected decrease in demand for pork because of the strike situations. The comparatively large increase in receipts of hogs during the first weeks of September was chiefly caused by shortage in feed supplies and the steadily mounting prices of feed grains which precluded the possibility of profit if grains were purchased. The average weight of all hogs (excluding pigs) sold at South St. Paul during the week ending September 20 was only 216 pounds, which was 27 pounds lighter than the average for the week ending September 6, two weeks previous, and 57 pounds lighter than for the week ending August 23. In addition, a rather large proportion of all weights and classes received during recent weeks was in thin condition. Several loads of stunted pigs, weighing only from 25 to 50 pounds, have been received at South St. Paul, which were difficult to sell even at 25-75 cents per hundredweight, according to the report of the representative of the United States Department of Agriculture, Bureau of Agricultural Economics, stationed there.

The August median butcher cattle prices were mostly unchanged from July, with the exception of butcher steers weighing 1,100 pounds and over, which regained in August the sharp loss recorded in July. Throughout August and the first three weeks of September, receipts of dry-fed, heavyweight steers and heifers have been somewhat below requirements. This shortage, although not pronounced, resulted in gradual price improvement for these classes of cattle to a point where the season's top of \$9.50 for grain-fat cattle was again recorded on September 21. Median prices for other classes of butcher cattle showed no change from July, except that prime butcher steers weighing less than 1,100 pounds recorded a small gain as a result of the shortage in prime steers at heavier weights.

Feeder cattle median prices for August were higher than in July and in August last year, reflecting a strong demand that readily absorbed supplies somewhat larger than those of July. Since September 1, weekly average prices have declined a little, but the weekly "tops" have been a little higher than during the month of August. Shipments of feeder cattle during the three-week period ending September 19 have shown a more than seasonal increase over August shipments, and were about 10 per cent larger than in the same three weeks last year. During recent weeks, feeder cattle buyers have shown a strong preference for feeders of high quality, as shown by the "top" prices paid. High-cost feed grains and concentrates make most efficient use of them necessary, and well-bred, well-developed young stock in fair flesh have repeatedly shown larger and quicker gains on smaller feed consumption than cattle of lower quality.

Index number of industrial production, adjusted for seasonal variation. (1923-1925 average=100.)

Indexes of daily average value of sales. (1923-1925=100.)

Indexes of the United States Bureau of Labor Statistics. By months 1929 to 1931; by weeks 1932 to date. (1926=100.)

Wednesday figures for reporting member banks in 90 leading cities. Latest figures are for September 19.

Summary of National Business Conditions

(Compiled September 26 by Federal Reserve Board)

The total output of industry, which usually increases at this season, showed little change in August. Factory employment and payrolls increased between the middle of July and the middle of August by about the usual seasonal amount. Distribution of commodities at department stores showed a more than seasonal growth.

PRODUCTION AND EMPLOYMENT: The output of basic industrial products, as measured by the Board's index, which makes allowance for usual seasonal changes, declined from 75 per cent of the 1923-1925 average in July to 73 per cent in August. At steel mills production continued to decline during August and the early part of September, contrary to seasonal tendency; in the middle of September a slight increase in activity was reported. Output of automobiles, which had been maintained at a relatively high rate during the spring and early summer, declined in August. Lumber production showed an increase. In the cotton textile industry, production was in larger volume in August than in July, but was retarded by the strike in the first three weeks of September. At meat packing establishments, output in August was larger than in any other recent months, accompanying heavy marketings of cattle from drought areas.

Factory employment showed a seasonal increase between the middle of July and the middle of August, reflecting considerable growth in employment in the wearing apparel, canning and meat packing industries, while employment in the iron and steel industries and at railroad repair shops declined.

The value of construction contracts awarded, as reported by the F. W. Dodge Corporation, was about the same in August as in each of the four preceding months.

Department of Agriculture estimates as of September 1 indicate a corn crop 40 per cent smaller than the average for the five years 1927-1931, and other feed crops also are expected to be unusually small. The condition of pastures on September 1 was poorer than in any other recent year, but some improvement has been reported in the early part of September. The spring wheat crop, estimated at 93,000,000 bushels, is about one-third of the five-year average, and the winter wheat crop is also small. The cotton crop is estimated at 9,300,000 bales, a sharp reduction from other recent years.

DISTRIBUTION: The volume of freight carloadings, which usually increases at this season, showed little change in August. Shipments of miscellaneous freight showed no seasonal expansion, while shipments of livestock increased considerably. Department store sales increased by an amount substantially larger than is usual in August and were 2 per cent higher than a year ago.

COMMODITY PRICES: Wholesale prices of commodities increased in August and the first week of September, reflecting sharp advances in the prices of farm products and foods. Hog prices advanced rapidly during the month of August, and in the latter part of the month, cattle prices also showed a marked increase. Since the beginning of September, prices for both hogs and cattle have declined somewhat, and in the middle of the month there have also been decreases in the prices of wheat and cotton. In August, as in other recent months, there was little change in prices of commodities other than farm products and foods.

BANK CREDIT: A seasonal increase in demand for currency by the public and an increase in Government deposits at the Reserve banks were reflected in a decline in member bank reserve balances between the middle of August and the middle of September. On September 19, reserve balances were about \$1,700,000,000 in excess of legal requirements. There was little change in the volume of Reserve bank credit during August and September.

Total loans and investments of reporting member banks showed little change between August 15 and September 19; loans, other than security loans, increased by \$170,000,000 and holdings of securities by \$50,000,000, while security loans declined by \$200,000,000. The increase in loans, other than on securities, occurred largely at banks in New York City and in the western districts, and reflected chiefly a growth in direct loans to customers for ordinary commercial purposes and for financing the harvesting of crops. The banks' holdings of acceptances and commercial paper, which also reflect current business financing, increased during the period.

Short-term money rates continued at low levels. Yields on both United States Governments and corporate bonds increased during August and the first half of September.
