

FEDERAL RESERVE BANK OF MINNEAPOLIS  
BANKING AND POLICY STUDIES

**Minneapolis Options Report – May 3<sup>rd</sup>**

*Banks*

Trading in options on bank stocks was light for US firms. Downside volume percentages jumped as underlying prices rose. Options on PNC and RF stock also had relatively strong activity. RNPDP standard deviations fell for every bank we follow relative to our last report. The median RNPDP standard deviation for the CCAR firms fell 230 basis points. The CCAR median had been increasing since January but has now retraced.

Two week returns for these firms were quite strong: Median CCAR bank stock rose 5.3%. Shares of C, AXP, COF, FITB, PNC, and RF have drifted higher since their earnings results were made public. As underlying prices have drifted higher, options volumes have shifted to lower strikes.

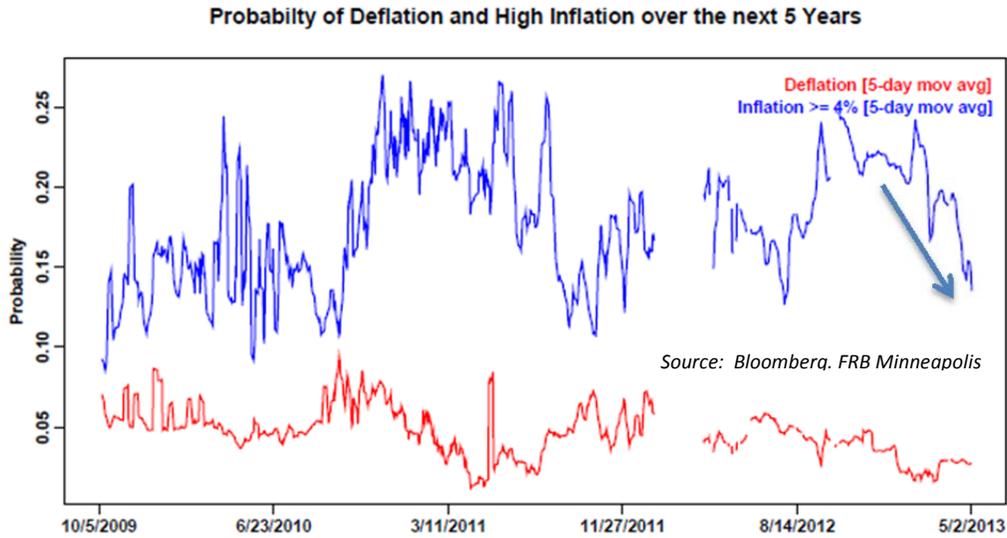

Additional notes:

- Above average trading activity in options on BK stock featured deeply out of the money strikes. The RNPDP derived from options on BK stock skewed more negatively. (*See BK report*)
- MS stock was up nearly 10% since our last report and trading was about average. The RNPDP skew became more negative in response to the underlying price move. (*See MS report*)
- The volatility smiles for PNC and RF shifted lower on relatively strong trading. (*See PNC and RF reports*)

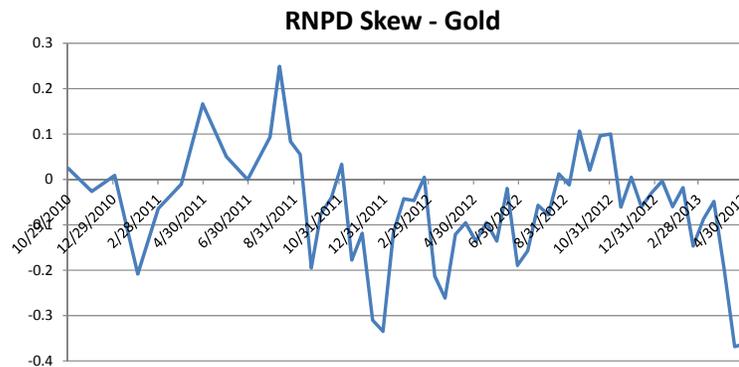

*Other Commodity Markets*

Trading was strong again last week in options on the other commodities we follow. Volumes continue to be strong in options on precious metals and exchange rate futures. Options trading jumped in grain markets last week. Trading was below average in options on the S&P 500 index. Tail risks were generally lower relative to two weeks ago as measured by changes in the

standard deviations of derived RNPDs and risk neutral inflation probabilities continue their decline.

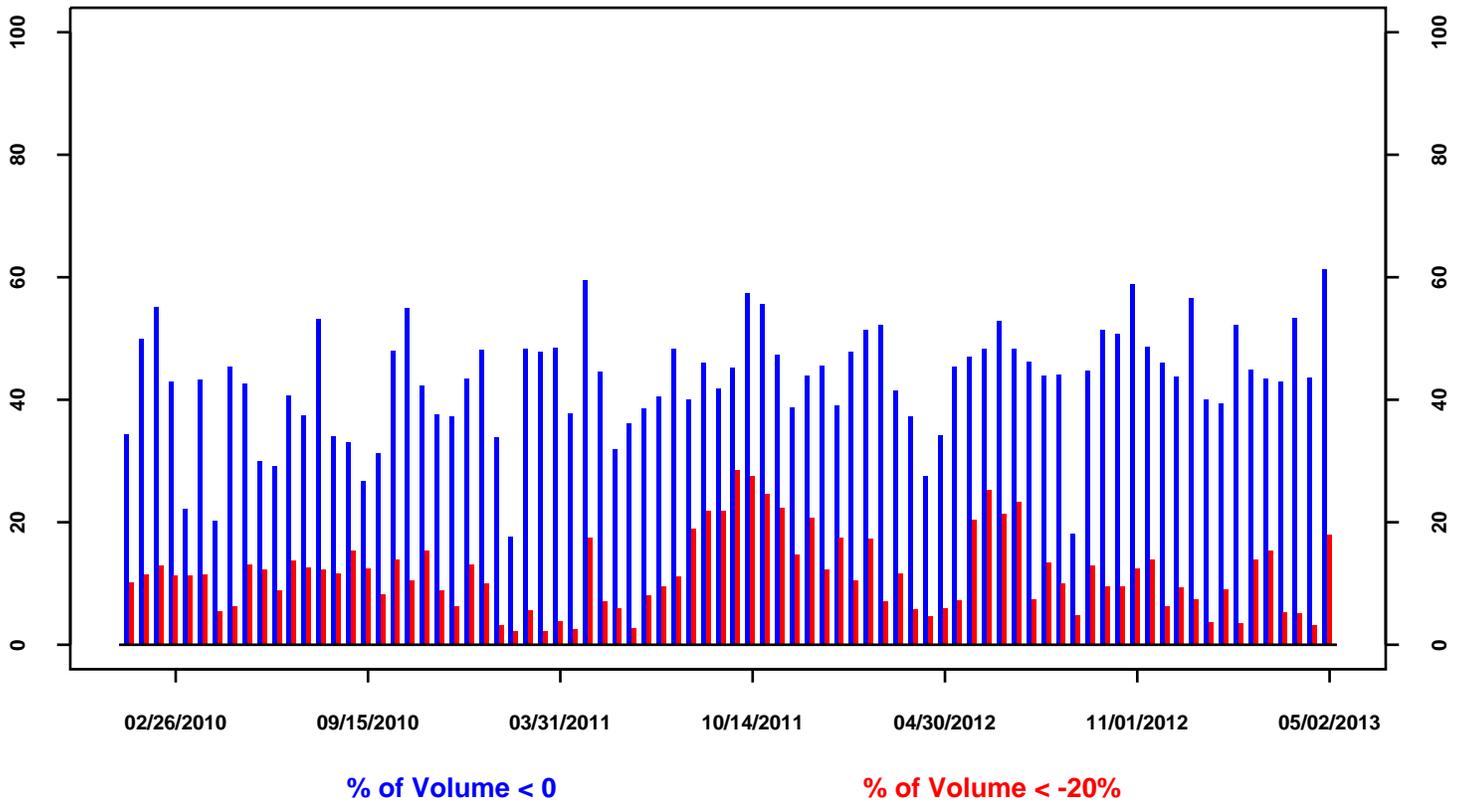

- Risk-neutral probabilities of large upside moves continued to rise in the grain markets. Interestingly, RN probabilities of large downside moves ticked lower. Volumes were notably higher relative to two weeks ago. (See grain market reports)
- Bucking the lower tail risk trend, the standard deviation of the RNPD derived from options on corn futures continues to rise. (See corn report)
- Gold and Silver spot prices are up relative to two weeks ago, 5.5% and 2.6% respectively. We point out the downward shift in the volatility smile for both commodities. The current downside skew in the Gold RNPD is the most negative we have measured in the past 36 months. (See Gold and Silver reports)

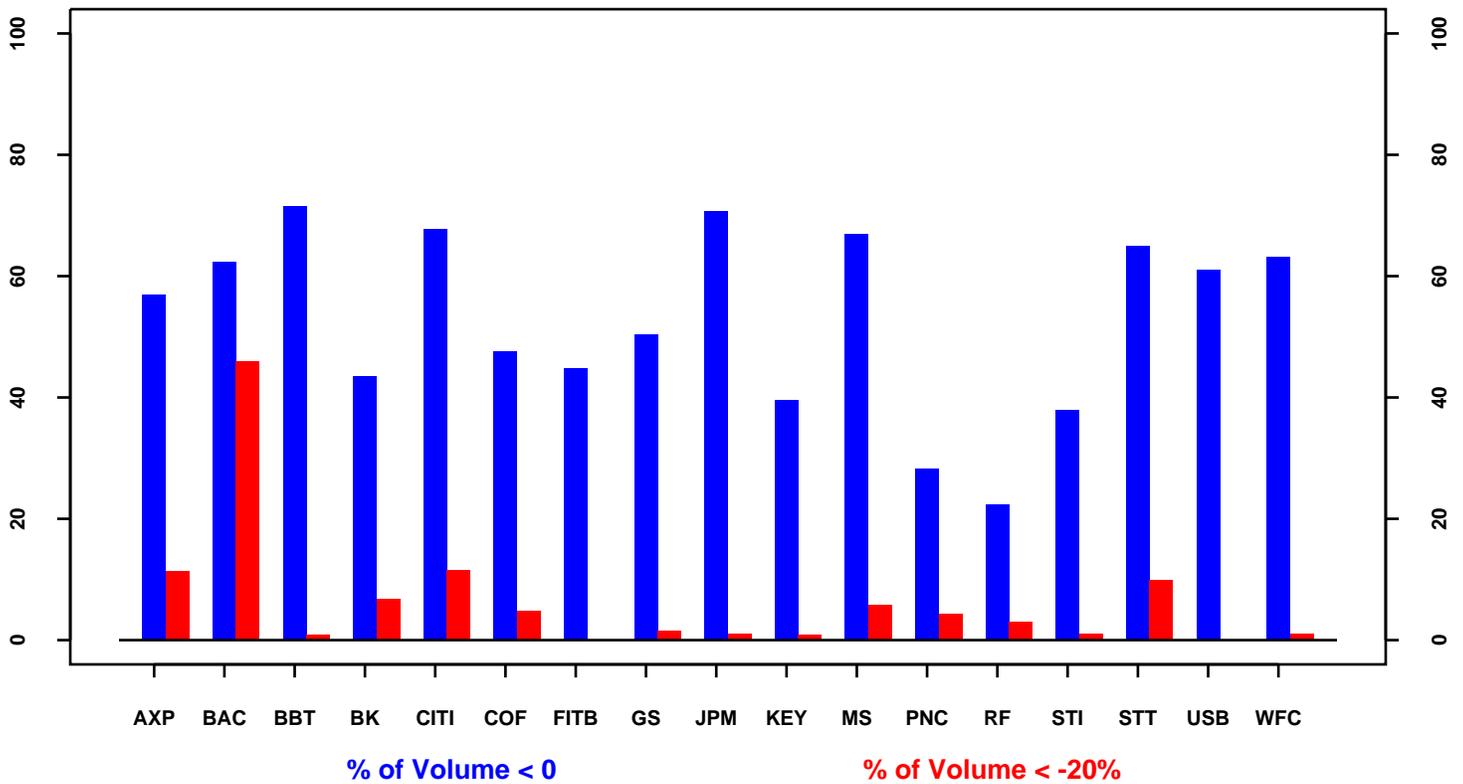

- Statistics from RNPDs derived from options on exchange rate futures remained largely unchanged despite strong trading. (See exchange rate reports)
- The DJ Real Estate Index rose another 3% over the past two weeks. Options volumes were very strong. (See real estate report)
