No. 236)

Minneapolis, Minnesota

August 28, 1934

DISTRICT SUMMARY OF BUSINESS

The volume of business in the Ninth Federal Reserve District declined in July from the level of June. The sharpest decrease occurred in the seasonally adjusted index of sales at city department stores. Doubtless the truck drivers' strike in Minneapolis was a factor in this decrease. The index of city department store sales decreased from 71 in June to 61 in July. The adjusted index of miscellaneous freight carloadings declined from 66 in June to 61 in July. The country check clearings index and the index of l.c.l. freight carloadings showed minor decreases. The index of bank debits was the same in July as in June and the index of country lumber sales rose from 47 to 51.

Business records for July did not make as favorable a comparison with the figures for the corresponding month last year as had been made by the records of earlier months. However, it must be recalled that July last year was the peak of the sharp business recovery of that summer. The daily average of bank debits was 15 per cent lower in July than in the same month last year. Country check clearings were 12 per cent higher in July than a year ago, and freight carloadings, excluding l.c.l. freight, were 9 per cent larger than a year ago. The increase in freight carloadings was principally due to a continued larger volume of iron ore movement and to a heavy movement of livestock as a result of the Government cattle buying activities. Miscellaneous freight carloadings were slightly larger than in July last year and all other classes of freight were moved in smaller volume than a year ago. Other increases over last year's figures occurred in electric power consumption in the eastern part of the district, in building contracts, real estate activity in Hennepin and Ramsey counties, country lumber sales, securities sales and wholesale hardware sales. Declines from last year's volume occurred in electric power consumption in Montana and in building permits, flour shipments, linseed products shipments, copper output, butter production, grain marketings, hog marketings and wholesale shoe sales.

Retail trade was somewhat larger in July than in the same month last year, both in the cities and in the rural sections of the district. City department store sales were less than 1 per cent higher than a

year ago. Five hundred and four country stores reported an increase of 8 per cent in their volume of sales over the volume in July last year. The greatest percentage increases over last year occurred in the iron mining and summer resort regions, in southeastern Minnesota, west central Wisconsin and in both eastern and western Montana. The only section to report a decrease was North Dakota, excluding the Red River Valley area. The trend of retail sales in the various subdivisions of the district is given in the following table:

Retail Trade

	Per Cent July 1934, of July 1933
Minneapolis, St. Paul, Duluth-Superior (22 stores)	101
Country Stores (504 stores)*	108
Minnesota, Southwestern (45 stores)	103
Minnesota, Southeastern (25 stores)	108
Minnesota, South Central (24 stores)	101
Minnesota, Central (12 stores)	101
Minnesota, Northeastern (14 stores)	125
Minnesota-North Dakota, Red River Valley (11 stores)	104
Montana, Mountain (16 stores)	113
Montana, Plains (34 stores)	121
North Dakota (55 stores)	98
South Dakota, Southeastern (18 stores)	107
South Dakota, Other Eastern (46 stores)	103
Northern Wisconsin and Michigan (40 stores)	119
Wisconsin, West Central (45 stores)	108
Ninth District (526 stores)	106

*Reports of some chain store organizations not subdivided by regions.

In the first half of August, both bank debits and country check clearings were above last year's volume. Bank debits in the two weeks ending August 15 were 6 per cent larger than in the same two weeks last year, partly as a result of some transfers of balances without business significance. Country check clearings in the first fifteen business days of August were 16 per cent larger than in the same period last year.

DISTRICT SUMMARY OF BANKING

Deposits at city member banks increased 16 million dollars during the four weeks ending August 15 and reached the highest level since midsummer of 1931. The increase in deposits was principally in deposits due to correspondent banks, which rose 11

million dollars and reached the highest point in our eight-year record, with the exception of one week in November, 1927. Demand deposits due to commercial and individual depositors also increased materially during the four-week period. This increase in deposits was accompanied by a sharp autumn upturn of 7 million dollars in loans to customers. Investments increased 2 million dollars, and balances carried with other banks, including the Federal Reserve Bank, increased 11 million dollars.

Country member bank deposits remained practically unchanged between the daily average for June and the daily average for July. There were minor increases in deposits at country banks in Minnesota, South Dakota and Wisconsin and decreases in banks in the northern peninsula of Michigan and in Montana.

Loan Changes in the First Half of 1934

The Federal Reserve Board has asked all member banks to report for each of the first six months of 1934 the amount of new loans made, the amount of loans repaid (excluding renewals) and the amount of loans written off. Although the reports for this district are not complete, the majority of the figures have been received and it is possible to indicate what has happened to customers' loans in the member banks of this district during the period under survey.

In the 382 country member banks whose figures have been received up to the time of writing, loans decreased from 118 million dollars to 106 million dollars during the first half of 1934. Nearly 5 million dollars of the decrease in loans represented loans written off as worthless. The remainder of the decrease consisted of an excess of repayments over new loans made. During the period, these country member banks made new loans amounting to 38 million dollars and received repayments on loans amounting to 46 million dollars. Repayments of loans exceeded new loans made in every one of the six months.

Changes in Loans to Customers

January-June, 1934

(In Thousands)

382 Country Member Banks	New Loans Made	Loans Repaid	Loans Written Off
January	\$ 5,277	\$ 8,764	\$ 475
February	5,459	7,085	213
March	6,717	7,653	605
April	6,718	7,207	2,416
May	7,255	7,596	429
June	6,851	7,685	625
Six Months	38,277	45,990	4,763
7 Reserve City Member Banks			
January	9,372	11,053	54
February	8,934	10,038	261
March	9,931	11,573	268
April	13,240	14,906	320
May	13,790	12,404	25
June	11,355	11,823	163
Six Months	66,622	71,797	1,091

At seven reserve city member banks in Minneapolis, St. Paul and Helena, the trend was the same as at country banks. The total volume of loans to customers decreased from 103 million dollars to 97 million dollars. Loans were written off amounting to 1 million dollars and repayments exceeded new loans by 5 million dollars. New loans were made during the six months amounting to 67 million dollars and repayments were received amounting to 72 million dollars. The turnover of loans was more rapid at city banks than at country banks. At the reserve city member banks, repayments exceeded new loans in every month except May.

Industrial Loans

On June 19, 1934, an Act of Congress was approved by the President, authorizing the Federal reserve banks to make loans to supply working capital to industrial and commercial enterprises. These loans are not to exceed five years in maturity and may be made either direct to business or indirectly by discount or purchase of obligations from financial institutions. The scope of these lending powers is given in the following quotations from the Act:

"(a) In exceptional circumstances, when it appears to the satisfaction of a Federal Reserve bank that an established industrial or commercial business located in its district is unable to obtain requisite financial assistance on a reasonable basis from the usual sources, the Federal Reserve bank, pursuant to authority granted by the Federal Reserve Board, may make loans to, or purchase obligations of, such business, or may make commitments with respect thereto, on a reasonable and sound basis, for the purpose of providing it with working capital, but no obligation shall be acquired or commitment made hereunder with a maturity exceeding five years.

"(b) Each Federal Reserve bank shall also have power to discount for, or purchase from, any bank, trust company, mortgage company, credit corporation for industry, or other financing institution operating in its district, obligations having maturities not exceeding five years, entered into for the purpose of obtaining working capital for any such established industrial or commercial business; to make loans or advances direct to any such financing institution on the security of such obligations; and to make commitments with regard to such discount or purchase of obligations or with respect to such loans or advances on the security thereof, including commitments made in advance of the actual undertaking of such obligations. Each such financing institution shall obligate itself to the satisfaction of the Federal Reserve bank for at least 20 per centum of any loss which may be sustained by such bank upon any of the obligations acquired from such financing institution, the existence and amount of any such loss to be determined in accordance with

regulations of the Federal Reserve Board: Provided, that in lieu of such obligation against loss any such financing institution may advance at least 20 per centum of such working capital for any established industrial or commercial business without obligating itself to the Federal Reserve bank against loss on the amount advanced by the Federal Reserve bank; Provided, however, that such advances by the financing institution and the Federal Reserve bank shall be considered as one advance, and repayment shall be made pro rata under such regulations as the Federal Reserve Board may prescribe."

To aid the Federal Reserve banks in the administration of this law, the Act provides that each Federal Reserve bank shall appoint an Industrial Advisory Committee to be composed of not less than three nor more than five members, who are actively engaged in industrial pursuits within the Federal Reserve district. In the Ninth Federal Reserve District, the following men have been appointed members of the Industrial Advisory Committee:

- C. O. Follett, President, Smith, Follett & Crowl, Fargo, North Dakota,
- Albert Miller, President, Miller Broom Company, LaCrosse, Wisconsin,
- H. C. Jewett, Sr., President, Jewett Brothers, Inc., Aberdeen, South Dakota,
- Sheldon V. Wood, President, Minneapolis Electric Steel Castings Company, Minneapolis, Minnesota,
- John M. Bush, Cleveland-Cliffs Iron Company, Negaunee, Michigan.

The first industrial loan under this Act was made during the week ending August 8, amounting to \$5,000. During the week ending August 15, other loans totaling \$7,500 were made by this bank.

DISTRICT SUMMARY OF AGRICULTURE

Farm Income and Prices

Farm income in the district from marketings of six important products during July was 24 per cent smaller than in July last year. A large part of the decrease was due to the lower level of grain marketing, which made an unfavorable comparison with the abnormally large receipts in July last year. The reduced volume of dairy output and the smaller receipts of hogs at markets were also important factors in the shrinkage of farm income. The income estimates exclude benefit payments and loans to farmers by Government instrumentalities.

From June to July there was a sharp rise in grain prices, which brought the price of bread wheat to the highest level since the spring of 1930, and the price of durum wheat to the highest level since 1929. In July the price of lambs dropped sharply, but was higher than in July last year. Prices of all grains, except rye and flax, butcher steers, hogs, lambs, fluid milk and hens were higher than in July last year.

Prices of lightweight stocker and feeder steers and calves were unchanged from a year ago. In addition to rye and flax, butter, eggs, butcher cows and heifers, heavy feeder steers and ewes were a little lower than in July a year ago. Because of a lower average quality and finish and a larger proportion of grassy western stock, butcher steer prices dropped sharply during July and were much lower than a year ago. The seasonally corrected index of northwestern farm product prices compiled by the University of Minnesota, declined during July to 55.7 from 56.1 in June, in sharp contrast with the rise from 47.7 in June to 55.8 in July last year. This index is based on the three-year period, 1924-1926.

Cold Storage Holdings

The holdings of important farm products in cold storage throughout the United States increased abnormally during July. As a result, holdings of poultry, beef and miscellaneous meats were larger than the five-year average on August 1, whereas a month earlier holdings of these commodities were below the five-year average for the corresponding date. Cold storage holdings of cheese, pork, lamb, mutton and lard also increased abnormally during July. Butter and eggs were the only commodities whose holdings did not increase by more than the usual amount during July. On August 1 holdings of butter, pork and lamb and mutton were all smaller than the five-year average for that date.

United States Cold Storage Holdings

(In thousands of pounds)

	August 1, 1934	August 1, 1933	August 1 5-Year Average
Beef	61,375	41,823	44,024
Pork	643,614	808,322	725,797
Lamb and Mutton....	1,517	1,594	2,323
Miscellaneous Meats..	78,628	74,522	73,363
Total Meats	785,134	926,261	845,507
Lard	209,628	219,259	156,833
Cream*	200	175
Butter	109,662	150,934	134,597

Eggs†	12,421	12,583	12,144

*Thousand Cans. †Thousand Cases.

Butter

Estimated butter production in the United States for the first six months of 1934 was nearly 10 per cent smaller than in the first half of last year. While the heavy production months of May and June this year showed increases over the production of March and April, the increase was much smaller than in the same months last year. Total butter production estimates for July are not yet available, but reports from a group of plants that ordinarily produce 25 to 30 per cent of the national total indicated a decrease of at least 10 per cent for July when compared with July last year. Reports from the same plants for the first three weeks ending in August indicate a decrease of a little more than 10 per cent.

Stocks of butter in cold storage increased between July 1 and August 1 by about the seasonal amount, but on August 1 were only 81 per cent of the five-year average for that date. Butter prices at Chicago have climbed rapidly during the first three weeks of August, rising from 24 cents on July 28 to 26 $\frac{3}{4}$ cents on August 16.

Livestock Marketing

Unusually heavy runs of cattle were received at South St. Paul and other mid-western markets during July owing to the large volume of Government purchased cattle and other "distress" marketings on account of the drouth. The total number of cattle slaughtered under Federal inspection during July was 1,191,981 head, which was 58.5 per cent more than in July, 1933. July slaughterings were the largest ever recorded for that month, and the fourth largest for any month. As a result of this abnormally large slaughter, cold storage holdings of beef increased sharply, as mentioned elsewhere in this issue.

Despite the large cattle receipts, butcher cattle prices declined but little during July, although further slight recessions occurred during the first three weeks of August. Stocker and feeder prices, however, declined steadily throughout July and during early August, partly because of excessive offerings at South St. Paul and other mid-western markets and partly because of a decreased demand on account of short feed supplies.

Hog receipts at South St. Paul were much smaller during July than in the same month last year and were smaller than in any month since August, 1932. Decreases in hog receipts also occurred at the six other important mid-western livestock markets. During the first three weeks of August, receipts have continued much smaller than during the same three weeks a year ago at these seven markets. The decreased receipts, in combination with higher wholesale pork prices, resulted in moderate gains in hog prices for July and in large increases during the first three weeks in August. New 1934 "highs" were established in each of the first three weeks in August, with a "top" of \$7.35 being recorded August 27, the highest price at South St. Paul since August, 1931.

Sheep and lamb receipts at South St. Paul during July were larger than in any month since last January and more than 40 per cent larger than in July last year. Receipts of sheep and lambs at the seven mid-western markets were a little larger in July than a year ago, but during the first three weeks of August, both at South St. Paul and the other six markets, receipts have been considerably below those of the same three weeks in 1933.

During July lamb prices at South St. Paul continued the gradual decline that started early in May. A small increase was made the first week in August, followed by a larger one the second week, but most

of this gain was lost during the third week when liberal supplies of range lambs were received. Slaughter ewe prices were steady to strong during July, an increase of 75 cents per hundredweight being shown in the median price computed in our office from representative sales.

Wool Production

According to the Government's estimate, wool production in Minnesota, Montana and the Dakotas amounted to 58,813,000 pounds in 1934, an increase of 2,500,000 pounds over the production in the preceding year. There was a small increase in the number of sheep shorn, but the average weight per fleece increased four-tenths of a pound in Montana, which accounted for most of the increase. The 1934 clip was the second largest on record for these states, being exceeded only by the clip of 1931. Owing to higher prices this year, the estimated income to farmers from wool was \$13,880,000, which was the largest income from this source since 1929.

In the United States as a whole, the 1934 wool production was smaller than that of 1933, owing to a decrease in Texas, but was a little larger than the 1929-1933 average.

Wool Production

(Thousand Pounds)

	1934	1933	1932
Minnesota	7,020	6,814	6,638
Montana	35,966	33,276	32,300
North Dakota	6,731	7,056	7,802
South Dakota	9,096	9,200	8,960
Four States	58,813	56,346	55,700
United States	354,529	364,730	344,354

Lamb Crop

Largely as a result of favorable weather conditions at lambing time and throughout the spring, the lamb crop in the four complete states in the Ninth Federal Reserve District was somewhat larger than in the preceding season. While the number of breeding ewes on farms last January 1 was slightly (less than 1 per cent) larger than the number on January 1, 1933, the 1934 crop was about 6 per cent larger than in 1933. In the entire United States, the 1934 lamb crop was about 1 per cent larger than that of 1933, but about 1 per cent smaller than that of 1932.

Lamb Crop in Minnesota, Montana, North Dakota, South Dakota and United States, 1932-1934

	1934	1933	1932
Minnesota	796	770	774
Montana	2,589	2,263	2,356
North Dakota	631	682	792
South Dakota	767	796	784
Four States	4,783	4,511	4,706
United States	29,339	29,068	29,613

Cattle on Feed

Reflecting the widespread feed shortage, the number of cattle on feed in the Corn Belt on August 1 was the smallest for that date in the last seven years. In Minnesota there were only 75 per cent as many cattle on feed August 1 as on the same date last year, and in South Dakota only 77 per cent. In the eleven states included in the Corn Belt, the number on feed was approximately 79 per cent of the number on feed August 1, 1933.

Crops

The August 1 crop production forecasts issued by the United States Department of Agriculture further emphasized the heavy toll taken by drouth this season, both in the four complete states in the Ninth Federal Reserve District and in the entire United States.

Feed crops suffered more than cash crops during July in our four states, the August 1 forecasts for corn, oats, barley and hay all showing material decreases from the July 1 forecasts. The greatest decrease was shown by the August 1 corn forecast, which was less than 75 per cent of the July 1 forecast.

Two of the four leading cash crops in our district, flax and potatoes, showed decreases during July, but the other two, wheat and rye, showed small increases owing to slightly larger threshing returns than had been anticipated. The 1934 production forecast for both wheat and rye, however, is but little more than half as large as the small crop of 1933 and less than one-third of the 1924-1933 average. With the single exception of potatoes, all of the other important crops in our four states are much smaller than the 1933 estimated production and far below the 1924-1933 average. The 1934 forecasted potato production in our four states is a little smaller than that of 1933, and a little less than 80 per cent of the 1924-1933 average.

When drouth conditions are so widespread and so long continued as they are this year, decreases in total production of an area do not tell the whole story. A great many farmers in our district will have no grain crops to harvest this year at all. Many crop reporters in South Dakota, in their county reports to the State Agricultural Statistician, state definitely that in their counties there will be no fields cut for grain. The average yield per acre, of course, will be very low. The acre yields of many fields are so low that in normal years, they would have been cut earlier for hay instead of being harvested for grain.

In contrast with the severe drouth conditions prevailing throughout most of our more important farming sections, there are three scattered sections where rainfall has occurred regularly throughout the growing season, even though somewhat below the normal amount, and crops are in excellent condition, acreage has not been abandoned, and ample

forage for a normal number of livestock will be available. One such section is in the most southerly tier of counties in Minnesota, a second is the central part of the Red River Valley extending into both Minnesota and North Dakota, and the third, the largest area, is the western part of Montana.

Wheat and Flax Marketings

Marketings of wheat produced this season in Minnesota, Montana, North Dakota and South Dakota were somewhat smaller than last year during the period July 1 to August 18 because of the greatly reduced crop. Favorable prices, however, have been responsible for prompt marketing of much of the wheat threshed, apparently, as 9.69 per cent of the estimated total available for marketing had been received at terminals by August 18, compared with 8.88 per cent during the same period last year. Marketings during July last year were much larger than in July this year and considerably larger than the average for July in the preceding four years.

Wheat Marketing Progress

(Estimates for Minnesota, North Dakota, South Dakota and Montana combined)

Crop and Carry-over	July 1 Through August 18, 1933 and 1934	
	1934 Bushels	1933 Bushels
July 1 Farm Stocks.....	17,091,000	32,396,000
July 1 Stocks in Country Mills and Elevators.....	13,075,000	16,050,000
New Crop	63,924,000	114,365,000
Total Wheat Supply.....	94,090,000	162,811,000
Less: Estimated Seed Requirements*	20,000,000	17,500,000
Remainder available for marketing at terminals, feed, country millings, etc.....	74,090,000	145,311,000
Receipts since July 1 at Minneapolis, Duluth and Superior, excluding S. W. wheat and duplications	7,183,000	12,910,000
Per cent marketed through August 18	9.69	8.88

During the twelve-month period, 7-1-33 to 6-30-34, 55 per cent of the 145,311,000 bushels available was marketed at terminals, amounting to 80,398,000.

*Based on acreage reported July 1 plus an adjustment of approximately 500,000 bushels for replanting of spring wheat and acreage abandoned prior to July 1, 1934.

Flax marketings this season up to August 18 have been very small, less than half as large as flax marketings in the same weeks last year. This is doubtless accounted for by the fact that the small crop of flax that will be harvested in our district was planted late, which will make the harvest later than last year. Much of the early planted flax acreage was a complete failure this year and was abandoned. Only 271,000 bushels (5.82 per cent of estimated amount available for marketing) of flax were marketed between August 1 and August 18, compared with 564,000 bushels (9.22 per cent of estimated amount available for marketing) last year.

Summary of National Business Conditions

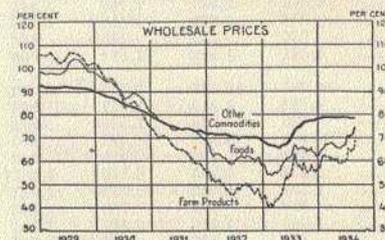

(Compiled August 23 by Federal Reserve Board)

Index number of industrial production, adjusted for seasonal variation. (1923-1925 average=100.)

Federal Reserve Board's index of factory employment adjusted for seasonal variation. (1923-1925 average=100.)

Indexes of the United States Bureau of Labor Statistics. By months 1929 to 1931; by weeks 1932 to date. (1926=100.)

Wednesday figures for reporting member banks in 90 leading cities. Latest figures are for August 15.

Industrial production declined in July. Factory employment and payrolls also decreased. Diminished output of steel was the chief factor in the decline of industrial activity which was larger than is usual at this season of the year. The general level of wholesale commodity prices showed little net change for July and advanced in the first three weeks of August.

PRODUCTION AND EMPLOYMENT: The volume of industrial output, as measured by the Board's seasonally adjusted index, decreased from 83 per cent of the 1923-1925 average in June to 76 per cent in July. This decline reflected chiefly a sharp reduction in the output of steel, due in part to previous accumulation of stocks by consumers. There was a further decline in steel operations during the first three weeks in August. Activity in the automobile industry decreased in July and there were considerable reductions in the output of pig iron and anthracite. At textile mills, where operations had been at a low level in June, activity showed little change in July. Output of shoes showed a seasonal increase. Accompanying heavy marketings of cattle from drouth areas, there was a considerable increase in activity at meat packing establishments.

Factory employment decreased between the middle of June and the middle of July by 3 per cent, an amount larger than is usual at this season. There were reductions in many industries producing durable manufactures, such as iron and steel products and building materials, and also at establishments producing knit goods and women's clothing. At canning establishments the number of employees increased by less than the usual seasonal amount. Employment on public projects increased further in July.

The value of construction contracts awarded, as reported by the F. W. Dodge Corporation, was about the same in July as in June.

Department of Agriculture estimates, based on August 1 conditions, indicate that yields per acre for principal crops were 22 per cent smaller than the ten-year average, reflecting the effects of the drouth. The wheat crop was estimated at 491,000,000 bushels, 37,000,000 bushels less than last year's small harvest, and the corn crop at 1,607,000,000 bushels, as compared with a five-year average of 2,516,000,000 bushels. The cotton crop estimate was 9,195,000 bales, about 4,000,000 bales less than last season and smaller than in any other year since 1921.

DISTRIBUTION: Total volume of freight carloadings declined in July, reflecting chiefly a reduction in miscellaneous freight, including steel shipments, offset in part by an increase in shipments of livestock. Department store sales showed a decrease of somewhat more than the estimated seasonal amount.

COMMODITY PRICES: Wholesale prices of farm products, after fluctuating widely in July, advanced considerably in the first three weeks of August. Between the beginning of July and the third week of August, cotton, wheat, and hog prices showed substantial increases while cattle prices declined somewhat. During this period prices of commodities, other than farm products and foods, as a group showed little change.

BANK CREDIT: Member bank reserve balances increased further between the middle of July and the middle of August and on August 15 were about \$1,900,000,000 in excess of legal requirements. The increase in reserve balances reflected principally a further growth in monetary gold stock, offset in part during the first half of August by a seasonal increase in the total volume of money in circulation. The volume of Reserve bank credit showed little change.

In the four weeks ending August 15, loans and investments of New York City banks decreased by \$141,000,000 while those of weekly reporting banks in other leading cities increased by \$116,000,000. The decrease at New York banks reflected a reduction of nearly \$200,000,000 in loans to brokers and dealers in securities, following a sharp decline in security prices in the latter part of July and a decline of \$52,000,000 in holdings of United States Government securities. All other loans and holdings of securities other than United States Government obligations increased substantially at New York banks and at banks outside New York City. At outside banks, holdings of United States Government securities also increased.

Average rates of discount on United States Treasury bills issued rose from .07 per cent in July to .23 per cent on August 22. Other open market money rates remained unchanged at low levels.
